Conservation principles

As a general rule all conservation materials to be used, must be in accordance with the nature of each item and nevertheless must be fully reversible.

In other words, it is imperative to be able to reverse each conservation treatment if necessary, without causing any further damage to the object.

Active involvement in all of the Hellenic Parliamentary Library Exhibitions

Continuous professional development

A very particular interest is given from all of us, to the continuous professional development and learning of the new technologies, as well as the latest updates on the conservation methods and treatments, following the international preservation ethics for museum objects and cultural properties

Conclusions

The conservator's responsibility is crucial The materials must be "saved" Originality & character must be preserved at all times Historic alterations must be maintained as valuable elements Any harmful damages should be removed and rightly restored All conservation treatments must follow a notion of "limits" and be judicious in their approach. The fewer the mechanical and chemical interventions, the more subtle the result
